

What is Thermography?

Thermography is a raised print that has some appearance qualities of engraving at a more affordable price. It is most frequently found on quality business letterheads. In addition to being raised it has a slight gloss to it.

We use thermography on:

- The front of our economical fold-over note card
- For the message on the 2-color engraved flat cards
- For all our one color flat cards
- Business envelopes
- Name tags
- Place cards
- Season's Greetings
- Gift boxed stationery

We can use thermography on business letterheads; however we normally recommend our laser thermography on business letterheads
